

Dell OpenManage 5

Course SSDL003 Two Days; Instructor-led

Overview:

The Dell Open Manage 5 two-day instructor-led course teaches students basic systems management skills within the framework of the Dell Open Manage suite of applications. Through a series of hands-on lab activities based on Dell's 9th generation Power Edge servers, students will learn installation, configuration, and troubleshooting techniques based on real-world customer issues.

Who Should Attend

This course is for IT professionals responsible for client and systems management and some server support responsibilities. It is also suitable for customers who are new to Dell and are server hardware support personnel.

Suggested Prerequisite

Before taking this course, we recommend that learners complete the following courses or have the following experience

- CompTIA Server+ certification
- Understanding Dell Serves and Systems Management
- 6 – 12 months real-world experience managing servers
